## DETAILED ACTION

### *Claim Rejections - 35 USC § 101*

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-12 are rejected under 35 U.S.C. 101 because the method of detecting a data structure does not present a concrete tangible result. As cited in the MPEP, "Claims to processes that do nothing more than solve mathematical problems or manipulate abstract ideas or concepts are complex to analyze and are addressed herein. If the "acts" of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter. Benson, 409 U.S. at 71-72 175 USPQ at 676. Thus, a process consisting solely of mathematical operations, i.e., converting one set of numbers into another set of numbers, does not manipulate appropriate subject matter and thus cannot constitute a statutory process." For example, in claim 1, applicant claims a method of detecting a data structure providing a register for storage of a bit value and then calculating a number (bit) which is basically executing an algorithm operation, therefore, the claim does not include a practical application nor produce a tangible result. In claim 1, lines 11-13, discloses "generating merging bits according to the number of leading zeros to thereby keep an average potential of the bits of data output from the eight-to-fourteen modulator near a DC potential" which, indicate a desired result of a mathematical problem. Hence, the desired result merely specifies a

characteristic of data, which is still merely a mathematical manipulation. Claims 2-12 are reject for the same reasons as claim 1.

### ***Allowable Subject Matter***

Claims 13-24 are allowed.

In regards to claim 13, the prior art made of record neither discloses nor suggests the combination of limitations of an optical storage device for processing recovered data comprising: an eight-to-fourteen modulator; a first 8-bit register connected between an eight-to-fourteen modulator for storing 8 least significant bits of data output from the eight-to-fourteen modulator; and a leading zero counter connected to the first 8-bit register for calculating a number of leading zeros stored in the first 8-bit register; wherein the optical storage device is for generating merging bits according to the number of leading zeros to thereby keep an average potential of the bits of data output form the eight-to-fourteen modulator near a DC potential.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
